

# SmartRunway™

Approaching

## Two Five Right

### Safe from the start.

A runway incursion happens every day, somewhere in the world, costing the industry \$100 million per year.

SmartRunway provides aural alerts and visual messaging to improve situational awareness during taxi, take-off, approach and landing. SmartRunway is configurable to support both 'heads-up' and 'quiet' cockpits and complements electronic flight bags when installed. Keeping you safe either on the ground or in the air.

## Honeywell

SmartRunway is an easy software upgrade to Honeywell's Enhanced Ground Proximity Warning System (EGPWS).
